

# Program for Leading Graduate Schools(All Round Category)

## Introduction of PhD Professional Program 2014

For any new strategic economical growth in Japan to succeed, the manufacturing innovation of Japan's Tokai region must be revitalized. Prosperity through revitalization cannot be achieved without strong partnerships with those Asian countries currently experiencing rapid economic growth. We call those countries Frontier Asia. The key theme of "Ph.D. Professional: Gateway to Success in Frontier Asia" is to nurture talents to become leading figures in a variety of fields: business administration and management, government, law, and politics, education and scientific research, mass media and communications, and for-profit or non-profit international organizations and other relevant fields. To raise those "professional Ph.D's", each candidate will be given lessons, seminars and opportunities for internship in order to gain and finesse abilities to communicate and discuss own ideas, to create and develop a project on one's own, to solve and manage a problem as it arises, and to become a leading work force anywhere in a global market.

Gateway to Success in Frontier Asia Raising Leaders to Explore New Horizons
